PROJECTS

Something Digital (Html, CSS, JS)
A website dedicated to providing comprehensive information about various social media platforms is a valuable resource for users seeking to navigate the digital landscape. It serves as a one-stop hub for all things social media, offering insights, tips, and updates on popular platforms like Facebook, Instagram, Twitter, LinkedIn, and emerging networks. From setting up profiles and managing privacy settings to leveraging these platforms for personal or business growth, this website equips users with the knowledge and strategies needed to thrive in the social media age. Stay informed, stay connected, and stay ahead with our platform, your ultimate guide to the dynamic world of social media.

BudgetBuddy -Android Application (XML, Java)
Developed "BudgetBuddy," an Android application designed to streamline expense and income tracking. Leveraged Android development skills to create an intuitive and user-friendly interface for efficient financial management. The app allows users to log and categorize expenses, track income sources, and generate insightful reports for informed decision-making.

ELearning -Android Application (XML, Java)
An application dedicated to delivering technical courses offers a diverse array of educational opportunities, empowering users to acquire and hone their skills in various technical fields. From programming and web development to data science, cybersecurity, and beyond, this platform provides a rich repository of courses, expert-led tutorials, and hands-on projects. Whether you're a beginner looking to build a strong foundation or a professional seeking to upskill, our application offers a seamless learning experience. With interactive content, progress tracking, and a supportive community, you'll embark on a journey of continuous growth, advancing your technical prowess in a flexible and engaging environment. Elevate your knowledge and career with our application, your gateway to a world of technical expertise.

Alexa Voice Assistant - (Python)
Developed a versatile voice assistant using Python, focusing on leveraging the language's core capabilities to create a straightforward and efficient hands-free interaction system. The project aimed to provide users with a basic yet functional voice-controlled assistant.
